

JOB POSTING

August 16, 2011

Mid-Level CLI-PHP Application Developer Carlsbad, CA

Currently we are seeking an experienced, server-side PHP developer. Candidate must have 2-3 years of hands-on experience developing cli-based applications with PHP. This is not a website development position. You must be comfortable developing in a *nix (Linux, OS X, etc.) command-line environment. You must have database experience and be able to write complex, efficient queries.

Successful candidate will have the following require skills and experience:

- PHP 5(00)
- MySQL 5
- Apache 2.2
- XML/XSD
- Bash

We are looking for a developer that understands and uses the MVC pattern. You should also be familiar with ORMs and have used the Zend Framework. Candidate must be organized, communicate well, and eager to join our team as we continue to develop our code libraries and products in a very fast-moving environment.

Qualifications:

- Attitude and teamwork is everything. If you have ever been complimented by being called a 'Cowboy', this is not the job for you.
- We prefer a developer with a Computer Science degree, but work experience is the primary requirement.
- You will be expected to take both a written and a practical exam, in order to demonstrate your skill level.

Please submit your resume, salary requirement, and samples of your code - scripts, classes, and libraries which you have helped to develop.
